

ICT Organics

1-2-3 Easy Mix & Spray System™

Our easy to use and economical line of biological plant growth enhancers will help you build your customer base, raise your bottom line, and avoid the heavy regulatory burden facing landscapers using older, synthetic materials, so you're more competitive.

1-2-3 Instant Compost Tea™ is a bacterially dominant inoculant specially designed for turfgrass systems. It is effective both as a foliar spray to existing lawns, and as a drench to the soil and/or roots when transplanting and over seeding. *Our original formula.*

1-2-3 Hydro-Seed™ is a special bacterially dominant formulation to increase germination rates and long term health of grasses in hydro-seed applications. This works beneath the mulch and on the seed to help guarantee results.

1-2-3 Tree™ alters the microbial balance more in favor of fungal species and is intended for woody plant applications such as transplanting and soil injection. Fungal symbiosis has been shown to enhance protection from pathogens, increase drought stress tolerance, and improve uptake of macro and micro nutrients.

1-2-3 Gluten-8™ is a liquid pre-emergent herbicide found in Iowa State trials to reduce crabgrass infestations by up to 93% compared to controls. Made from the same organic corn gluten feedstocks as granular material, but with low N so you stay within your N budget. Cost competitive, too!

1-2-3 NPP™ (Natural Plant Protection) is a naturally occurring, multilink chain polymer that increases soil water holding capacity, enhances the activity of anti-pathogenic bacteria and fungi, proteins to increase biological activity in the soil. Helps protect landscape plants by thickening cell wall lining.

How To Order

1-2-3 Easy Mix & Spray™ System products are available in convenient job-size containers. Contact your dealer or visit our website to order singly or for larger case and pallet quantities.
