

Essential 1 PHE™

Plant Health Enhancement

**Repels insects while boosting plant vigor
Contains a wide range of active ingredients
All natural, EPA exempt, NOP approved**

Essential 1 PHE™ (Plant Health Enhancement) packs a one-two punch to pests and pathogens. A broad range of recognized botanical extracts and pungent essential oils suppresses pest pressure while its rich base of fermented sucrose boosts plant metabolism and phyto-defense. Stronger plants and a pest unfriendly environment add up to improved results, and all without dangerous and expensive synthetics.

Formulated entirely from EPA Sec 25b exempt ingredients and approved for use even under the stringent National Organic Program, Essential 1 PHE™ free you from regulatory burdens while still providing the tools you need to keep your clients' landscapes looking right.

Ingredients include: activated pepper (capsicin) and garlic extracts, plus oils of cedarwood, lemongrass, rosemary, neem, clove and citrus, all fermented in a proprietary base of complex long chain carbohydrates and sucrose. Stable for storage, and harmless to animals, trees, crops or groundwater when used as recommended. All ingredients classified exempt under EPA Sect 25b, and conform to USDA National Organic Program (NOP) standards.

Application Notes: For turf or woodies, mix a half pint to a quart per gallon and apply five (5) gallons per acre, or a pint (16 oz) per thousand square feet. Always stir, shake or agitate before use. Always add product last to tank containing water. Apply during early morning or late afternoon hours.
